

Product Upload App Walkthrough

Product Upload App Walkthrough

Objective

- Build a React Native app that allows users to upload up to 5 products.
- Each product requires:
 - Product name
 - Product image (from phone gallery)
 - Product price
- Show toast notifications for key actions.
- Use local state management with Redux.

Tech Stack

- Expo + React Native + Expo Router
- Redux Toolkit + React Redux
- Expo Image Picker

Current Flow

1. User opens `Home` tab (Upload screen).
2. User enters product name, price (Naira), and selects image.
3. User taps `Upload Image`.
4. Product is saved to Redux local state.
5. App immediately navigates to `Explore` tab to show uploaded product.

Product Rules

- Maximum product uploads: 5 (`MAX\_PRODUCTS = 5`).
- Validation checks before upload:
 - Name is required
 - Photo is required
 - Price is required and must be valid (> 0)
- If user tries to upload after 5/5, upload is blocked.

Toast Notification Behavior

Global top-toasts are used (slide down from above), and trigger on:

- Successful product upload
- Product removed from Explore
- Upload limit reached (5/5)
- Validation errors (missing/invalid fields)

UI/UX Details Implemented

- Home screen uses a full-height card layout that fits the screen safely.
- Upload button is positioned at the bottom section of Home for clear flow.
- Upload box is shown only when no image is selected.

- Currency display is Naira (₦) in input placeholders and product pricing.
- Explore cards are large and readable with bigger product images/details.
- Explore cards have a top-right ✕ remove control.

State Management Design

- `products` slice:`
 - `addProduct``
 - `removeProduct``
 - `MAX_PRODUCTS``
- `toast` slice:`
 - `showToast({ message, type })``
- Global toast component is mounted at root layout so all tabs can trigger toasts.

Key Files

- `app/(tabs)/index.tsx``
 - Upload form, validation, add-product logic, immediate navigate to Explore
- `app/(tabs)/explore.tsx``
 - Uploaded products display and remove action
- `app/(tabs)/_layout.tsx``
 - Tabs configuration (‘Home’, ‘Explore’)
- `app/_layout.tsx``
 - Redux Provider + global top toast mount
- `store/productsSlice.ts``
 - Product data and limit logic
- `store/toastSlice.ts``
 - Toast event state
- `store/index.ts``
 - Store reducer registration
- `components/top-toast.tsx``
 - Top-slide animated toast UI

Safety Notes

- Product data stays local in Redux (no backend/network upload).
- Gallery access is permission-gated.
- Remove action only updates local state safely.

Run Instructions

1. Install dependencies:
 - `npm install``
2. Start app:
 - `npm start``
3. Open on phone:
 - Scan QR with Expo Go.

Validation Checklist

- Upload succeeds with valid name + photo + price.
- App auto-navigates to Explore after successful upload.
- Explore immediately shows uploaded item.
- `` remove on Explore deletes item and triggers top toast.
- Limit at 5 is enforced and notifies user.
- Top toast appears from above for upload/remove/limit/validation events.
